MASS truHEPA™ HEPA FORCED AIR SOLUTION

Dry, Fresh Air

Ordinary fans, filtered or not, typically circulate stale air in a closed space. With the MASS truHEPA™, your endoscopes are kept in a dry, fresh environment. The CDC states that keeping stored endoscopes dry significantly reduces the chance of recontamination by microorganisms that can proliferate in any remaining water droplets.[1]

Positive Pressure

As well as ensuring dryness in the cabinet, MASS truHEPA™ replaces the cabinet's air every two minutes. This mechanism promotes infection control by creating positive pressure in the endoscope storage cabinet.

HEPA Filtration

The MASS truHEPA™ captures 99.97% of particulates. The .3 micron filter removes potential contaminants from the cabinet air by creating pressure that is greater inside than outside the cabinet.

Are HEPA filters required?

AORN's guidelines state that the use of HEPA filters can help prevent bacterial growth in stored flexible endoscopes.[2] Consult your medical facility's storage recommendations.

MASStruHEPA™

HEPA forced air solution

A Product of MASS Medical Storage

- **Positive Pressure** created within cabinet
- **MASS truHEPA™** fully replaces air in the cabinet every two minutes
- **Low noise level** comparable to a residential refrigerator
- **Meets HEPA standards** set by SGNA and AORN
- Can be **installed** in **new** or **existing** cabinets
